

Getting started your SPFx form
customizer journey with a
boilerplate

Hello there 🙋

 I'm Michaël (*Maillot*, pronouncing "My – yo") 

 M365 Solutions Developer @**onepoint**.

List form customization: a brief story

List form customization: a brief story

- Wsp
- « CustomD
 - And its be
 - « Cust
 - « Cust
- PO: « Now
 - Dev: « Yo
 - PO: « Yes
 - Dev: « So
 - PO: « Yes. »
 - Dev: « NOOOOOOOOOOOOOOOOOOOO »

Until now on SPFx: WebParts / App pages

- With query parameters
- Based on legacy schema.xml file
 - Not supported

Finally: customization with SPFx!

- Started in v1.15
- As an Extension (« form customizer »)
- Hosted in a specific page
- Linked to a Content Type

Form customizer: how does it work?

- Hosting page
 - SPListForm.aspx
- Content Type association
 - List
 - Document Set
 - Hub
- Redirection through mandatory events

Demo

Don't forget!

- Specific page
 - UX / UI matter
 - Debug vs Deploy
- Etag is your friend
- A form customizer for each state... Or not!

Thank you!
